

MRSA, Bird Flu and Public Infectious Diseases

Known Facts and Established Science
Commonplace Attitudes Right and Wrong
Barriers to Change and Improving Prevention
Consequences for the Community

Martin Dudziak, PhD
Susan Hoeller, JD

with special contributions by

Carmella Angus
(and others, TBD) ¹

“In less than 200 pages, a trio of leading health care, pharmaceutical, biomedical and legal experts, with contributions from leading and recognized medical experts, provides a compact and useful set of tools for the public to understand what are the problems, what are some of the best solutions, and why certain feasible and economical solutions are presently available to provide greater prevention against community-acquired diseases in our hospitals, schools, and public institutions.”

¹ Tentative invitees that may be approached include experts from several govt. labs and private teaching hospitals

TABLE OF CONTENTS

Preface.....	3
Introduction.....	4
1. Our Unique Situation Today	4
The Infectious Disease Landscape and Panorama	4
United States and Canada	4
The Global Community and Environment.....	4
Numbers, Mobility, Transparency, and Reduced Defenses.....	4
2. MRSA and Related Treatment-Resistant Infections.....	4
3. Flu, Bird Flu, and other Potential Epidemic/Pandemic Diseases	4
4. Commonplace Attitudes – the Rights and Wrongs.....	4
Avoidance and Prevention	4
Detection and Diagnosis	5
Response and Treatment	5
5. Realistic Common-Sense Answers	5
For the Individual and Family.....	5
For Schools, Day care Centers, Clinics, Hospitals, Nursing homes, Public Places.....	5
For Medical Professionals.....	5
For Local and State Governmental Administrators and Officials	5
6. New and Available Protocols and Solutions for Our Times.....	5
7. Inertia and Barriers to New Solutions, and Why	5
8. Walking Down the Road Well-Traveled	6
9. Walking Up a New Path	6
10. Consequences for our Health Future.....	6
11. A Practical Plan to Fix the Situation.....	6
12. Prognosis.....	6
